The oriented projective plane  $T^2$  is an extension of the Euclidean plane  $E^2$  and comprises a number of advantages for algorithm design and implementation. We have extended the Computational Geometry Algorithms Library (CGAL) to allow for the implementation of geometric primitives and algorithms. The present video illustrates both the extension of a few algorithms to  $T^2$  under CGAL and a dynamic visualization system ( $T^2$  Viewer) built specially for displayin ...
